

CARPET YARN TUBES

Sonoco Alcore® carpet yarn tubes are built around decades of industry experience. Our development initiatives and close relationships with manufacturers allow us to provide reliable cost effective tubes to numerous yarn producers across Europe. We deliver tubes that offer consistent performance and improve winding, string-up, and doffing efficiency - all of which improves your overall productivity. Allow Sonoco Alcore® to provide you with yarn tubes tailored to your needs in terms of composition, length, inside and outside diameter, as well as specific groove and notch configurations.

A focus on consistent quality through our automated manufacturing processes helps us deliver tubes that meet the precise specifications of each individual customer. With plants strategically placed throughout Europe we offer just-in-time delivery services to further meet the needs of our customers. For applications requiring reusable carriers we also have the capability of providing increased strength tubes designed to meet your needs. We also supply tubes for carpet roll-up, allowing you to purchase all your carrier products from one source. This simplifies your purchasing, inventory management and logistics process.

BENEFITS IN BRIEF

- *Yarn tubes tailored to your specifications and end-use applications*
- *Custom notching facilitates winding and string-up efficiency for automated equipment*
- *Broad range of colour identification available*
- *Performance tubes suitable for use with all types of winding equipment*

CARPET CORES

Sonoco Alcore® offers high performance textile carriers that provide uniform start-ups, exceptional durability, stability, and product protection.

If you are using high speed applications, Sonoco Alcore® can use its Wide Ply technology to help determine the optimum combination of flat crush and beam strength for your operations. This technology provides you with a core designed to resist shipping and handling damage and prevent core breakages. Each core can be tailored to meet your needs in terms of inside diameter, wall thickness, and length. Full customer service is provided as we can provide start up features that ensure smooth and efficient wrapping of your product.

Take advantage of our ability to decrease your costs by providing just-in-time delivery practices, thus eliminating unnecessary carrier inventory. To further optimize inventory management and lower costs, use our value-adding supply chain management services. This allows you to focus on sales, marketing and manufacturing, while we optimize your operations.

BENEFITS IN BRIEF

- *Cores which are produced on state-of-the-art equipment to allow maximum winding efficiency, durability and stability*
- *A large variety of cores available in different inside diameters, wall thicknesses and lengths*
- *Cores that provide maximum beam strength while using the minimum amount of paper*
- *Industry-leading Wide Ply technology designed for high speed winding equipment*
